

Outdoor surfaces are exposed to different weather conditions and pollution

UV-light and the use of aggressive chemicals for cleaning will reduce the brightness and colours of surfaces

To maintain brand awareness, Vicom has developed a total solution in order to restore the original Corporate appearance.

“ the **HQ**(uality)-system”

Reconditioning activities are handled on site

- no replacement and no recycling costs
- Rapid re-instatement of the original corporate identity
- increased life span on materials
- reduction of maintenance costs

"the total solution that saves cost"

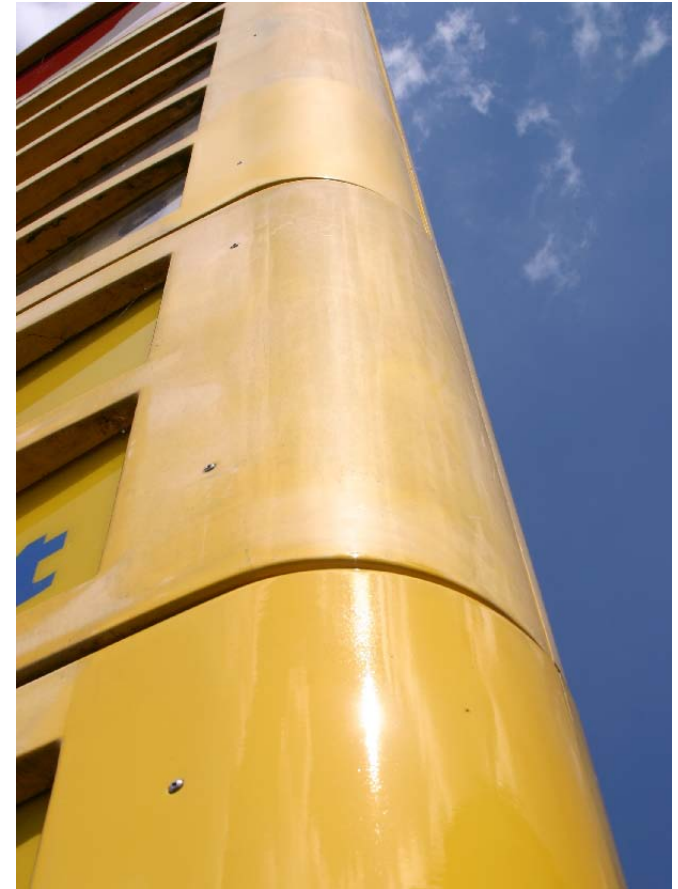

For the restoring of surfaces, special products are developed for :

- **cleaning**
- **adhesion**
- **coating**

Vicom has developed a **HQ**uality-program covering each phase of the process.

The goal is to deliver our customer a total solution with the best possible final result

The HQ-products are :

- Thermodynamic
- High durability
- Environmentally friendly
- Prevents corrosion
- Chemically resistant
- UV resistant
- No chalking or yellowing

Step 1

- cleaning with special products for all types of pollution and surface
- drying the surface

Step 2

- open the surface pores with adhesion promoter
- apply **HQ-transparent** coating (touch dry within 20 minutes)

This clearcoat will bring back the original colour and the surface will be protected for at least ten years

HQ-products can be used on surfaces:

- painted and galvanized steel
- painted aluminium
- plastics and vinyls
- polyester
- fibreglass
- polycarbonate

where
